# FONT

## Helvetica

Helvetica is a classic neo-grotesque sans-serif typeface known for its clarity, neutrality, and timeless modernism. Designed to be highly legible and versatile, it has become one of the most widely used typefaces in the world.

## Helvetica Neue

Helvetica Neue is a refined reworking of Helvetica, offering improved consistency, expanded weights, and better alignment across styles. It preserves the neutrality of Helvetica while enhancing flexibility and digital performance.

# BUTTON

## Primary Button

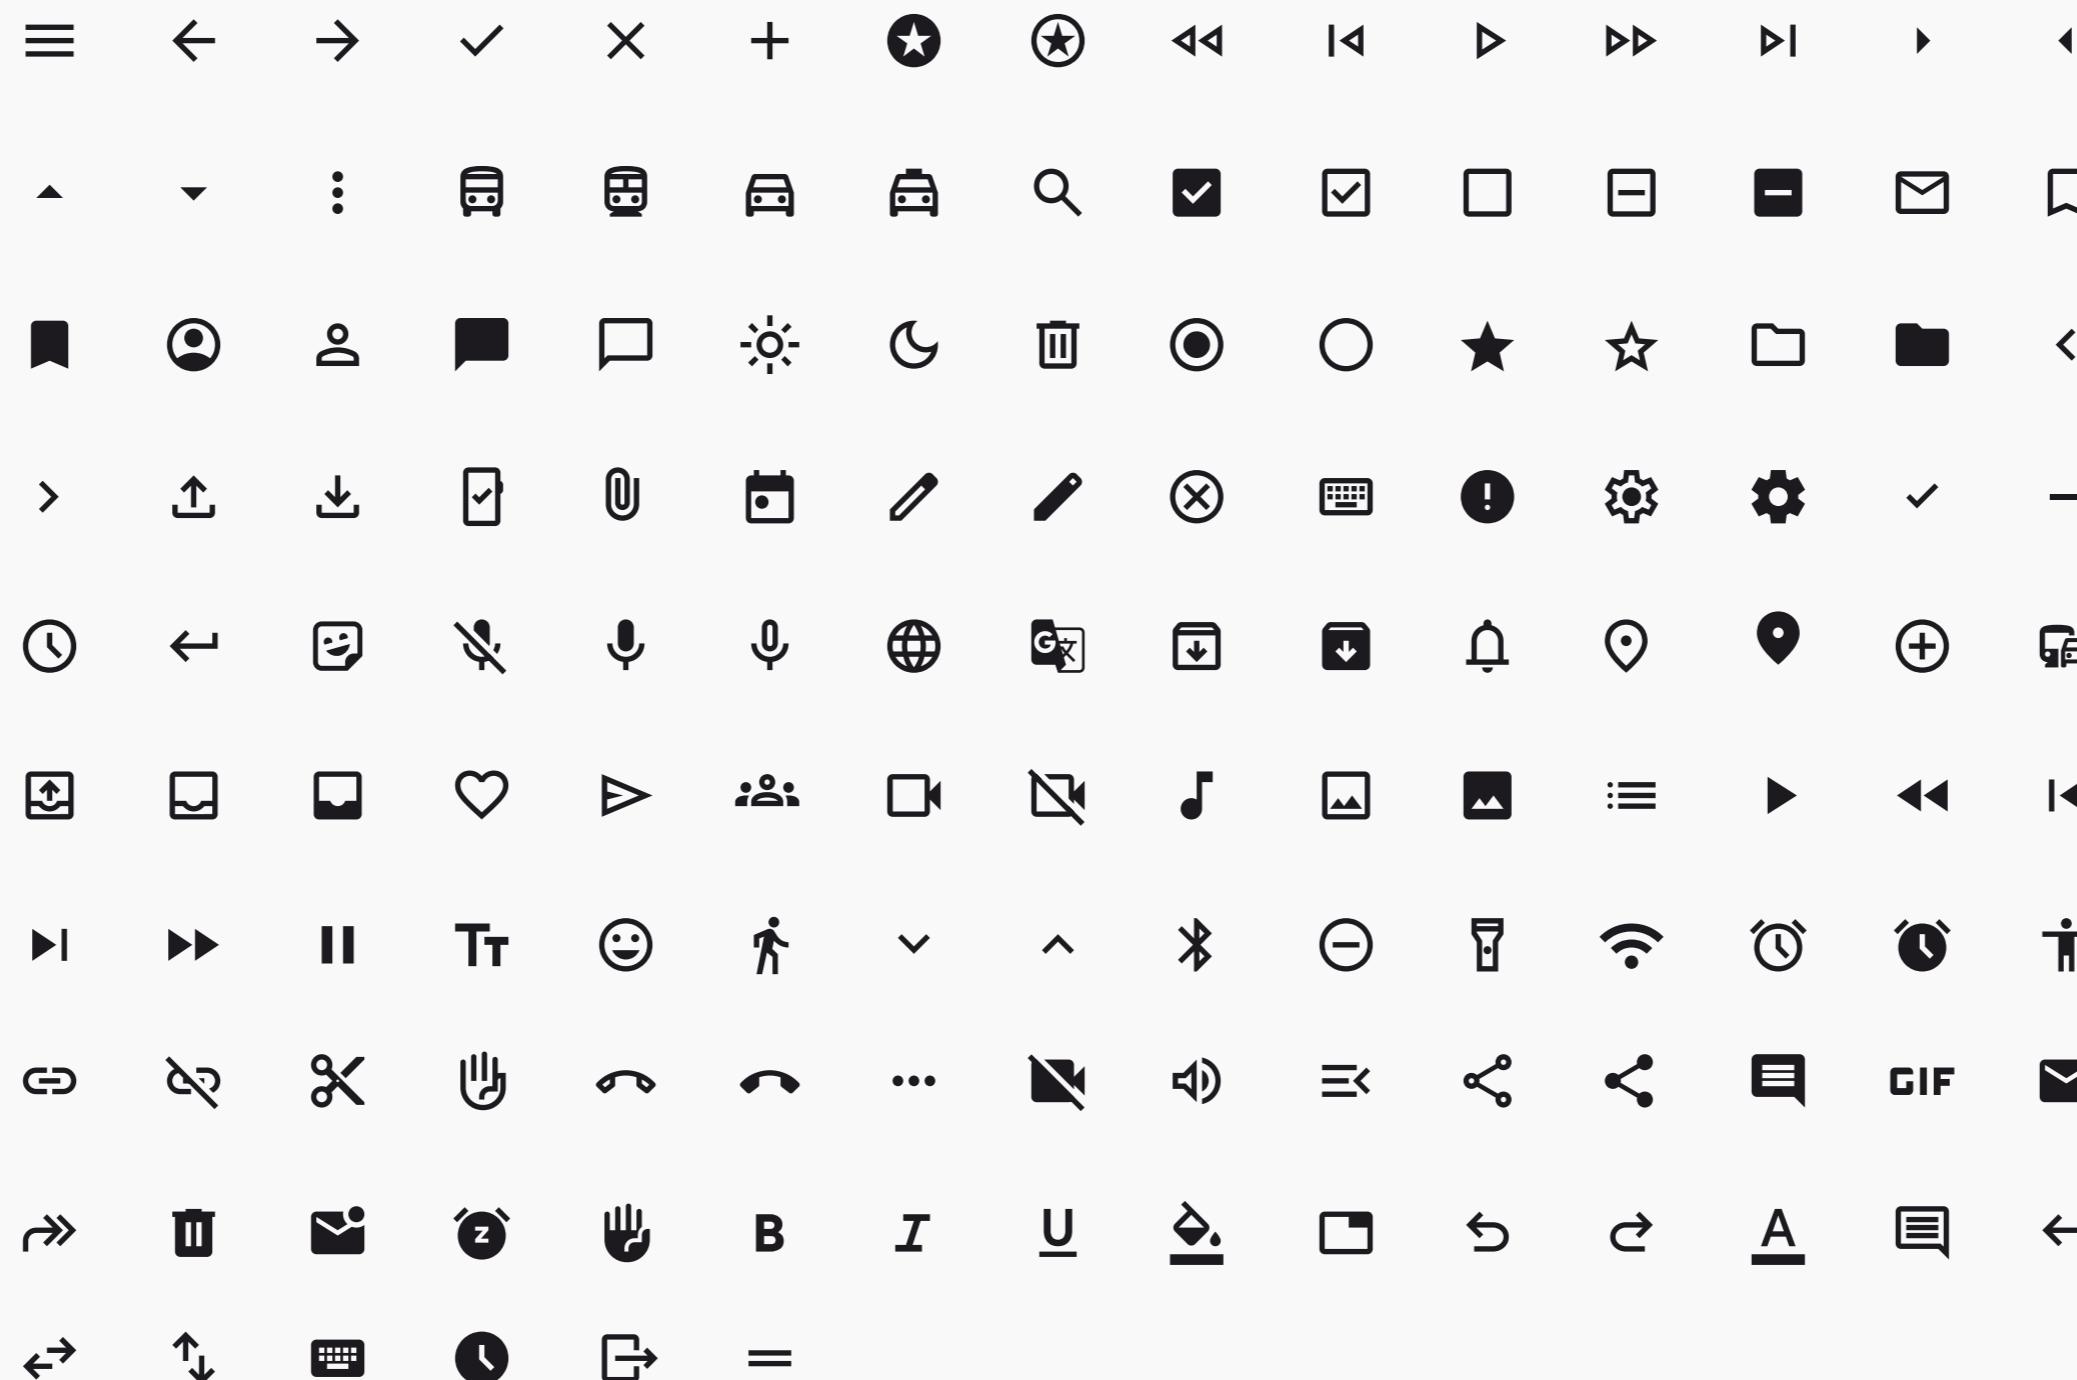

- The Primary button represents the highest-priority action in an interface and is visually dominant, typically using a solid background color to draw immediate attention and drive key user actions such as submitting, confirming, or proceeding.
- The Outline button is used for secondary actions that need visibility but should not compete with the primary action; it usually features a transparent background with a visible border to maintain clarity while reducing emphasis.
- The Ghost button is the lowest-emphasis style, often text-only or minimally styled, and is used for tertiary, supportive, or non-critical actions such as cancel, dismiss, or inline options, helping maintain clear visual hierarchy and reduce interface noise.
